WEATHER

WEATHER SYNOPSIS BY REGION:

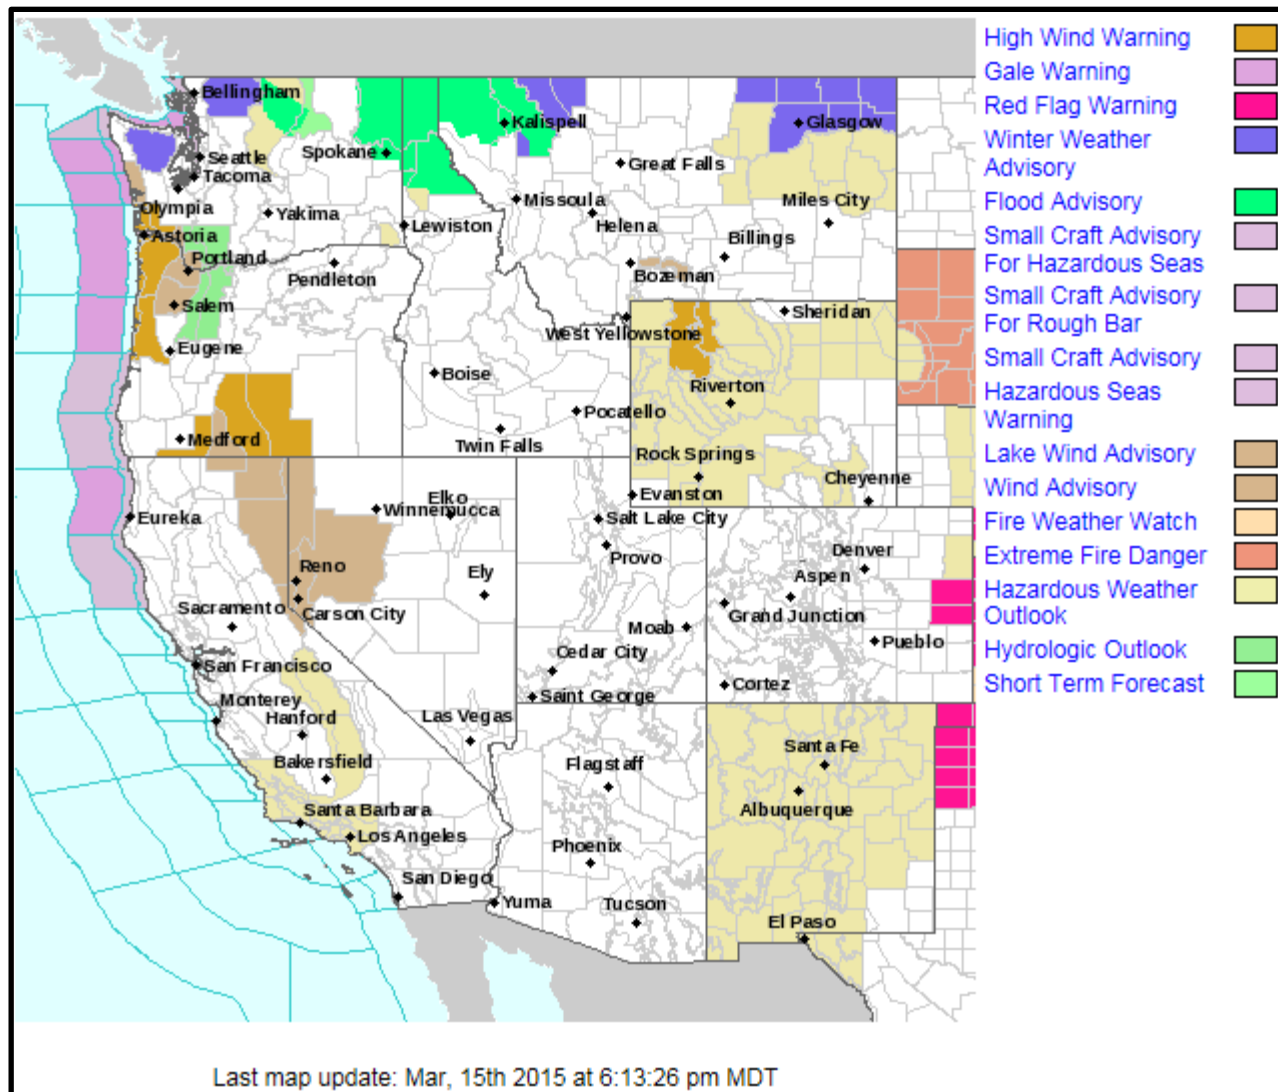

NORTHERN CALIFORNIA

The strong upper ridge that has been giving Northern California unseasonably dry and mild weather is forecast to weaken a bit today as a weather system finally moves into far northern California. Some light precipitation can be expected across the northern coast range and mountains of Shasta County, but the remainder of the region will likely remain dry. A series of weak waves will continue a very slight chance of showers over the mountains through much of the week.

SOUTHERN CALIFORNIA

High pressure aloft and weak offshore flow will continue well above average high temperatures today with locally gusty northeast to east winds near the coastal foothills. Cooling will develop near the coast on Monday and spread inland for Tuesday through Thursday along with increasing humidities. A little warmer for Friday and Saturday.
